SKILLS

Technical Skills: Full stack applications, smart contract/blockchain systems, security testing

Programming Languages: Golang, Typescript, Solidity, Python

EXPERIENCE

Bitswift Technologies

Kingston, ON

Lead Software Engineer

February 2022-Present

- Built a digital asset exchange and swap provider for projects in the Ardor and Cosmos ecosystems using Golang and React.
- Developed a token staking/vesting system and cross-chain bridge using smart contracts on the Juno network (Rust) and a Golang backend.
- Created Bitswift.Cash, an open source blockchain explorer and toolkit for the Ardor network using React and an ExpressJS backend.
- Pitched, designed and built custom e-commerce integrations for clients of Bitswift Technologies in the education and physical security industries.

AssetLedger

Toronto, ON

Blockchain Developer

October 2025-Present

- Designed and built the AssetLedger DAO and accompanying Solidity smart contract system for a decentralized carbon credit issuer and marketplace in Ontario.

BBB Wise Giving Alliance

Arlington, VA

Software Developer

July 2023-January 2025

- Created version 2 of the WGA's GiveSafely application for secure cryptocurrency donations to BBB-accredited institutions, using React and Typescript.
- Built a secure financial payments and data privacy system trusted by the country's top charity-accreditation institution.
- Abstracted away complicated concepts like asymmetric encryption and blockchain calls with simple user interfaces for non-technical users and administrators.

PROJECT EXPERIENCE

Turtosa

Rochester, NY

Co-founder and Backend Software Developer

July 2025-Present

- Building an enterprise compliance platform for data leak protection and organization-wide visibility into LLM usage.
- Helping small businesses self-host sovereign AI infrastructure for searching and analyzing sensitive data without relying on cloud platforms.

AWARDS AND RESEARCH

- CVE-2025-46011: Identified and reported a critical privilege escalation vulnerability in Listmonk
- Ketch: 1st place winner (\$18,500) at Hedera's Hello Future Apex Hackathon
- Meridian: 1st place winner (\$2,500) at ETHDenver 2026 for the "No Solidity Allowed" track
